

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	LTVIP2026TMIDS89849
Project Name	dog breed identification using transfer learning
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Template

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

⌚ 10 minutes to prepare
🕒 1 hour to collaborate
👤 2-8 people recommended

●

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

⌚ 10 minutes

➤

Team gathering

- Team members include AI/ML developers, web developers, and domain researchers.
- The AI developer focuses on model training using transfer learning.
- The web developer designs and implements the Flask-based interface.

➤

Set the goal

The goal of this brainstorming session is to identify an effective and user-friendly solution for dog breed identification. The focus is to develop a web-based AI system using transfer learning that provides accurate, fast, and reliable breed prediction for pet owners and animal shelters.

➤

Learn how to use the facilitation tools

The team will use structured brainstorming techniques such as empathy mapping, "How Might We" questions, and idea prioritization. Digital collaboration tools will be used to share ideas, evaluate feasibility, and select the best solution.

1

Define your problem statement

How might we develop an accurate and user-friendly web-based system that helps pet owners and animal shelters identify dog breeds quickly and reliably using artificial intelligence and transfer learning?

⌚ 5 minutes

PROBLEM

How might we improve the accuracy of dog breed prediction, especially for mixed breeds?

🧠

Key rules of brainstorming

To run a smooth and productive session

➤ Stay in topic.

💡 Encourage wild ideas.

➤ Defer judgment.

👂 Listen to others.

🗣️ Go for volume.

👁️ If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

TIP
You can select a sticky note and hit the pencil switch to identify can to start drawing!

3

Group ideas

The generated ideas were grouped into the following major categories:

- 1. AI and Model Development**
 - Transfer learning for high accuracy
 - Mixed breed identification
 - Use of deep learning and pre-trained models
 - Continuous model improvement
- 2. User Experience and Accessibility**
 - Web-based platform
 - Simple and user-friendly interface
 - Fast image upload and instant prediction
 - Easy access for non-technical users
- 3. Additional Features**
 - Breed-based health and diet recommendations
 - Training suggestions
 - Confidence score and breed comparison
- 4. Real-world Applications**
 - Use in veterinary clinics and animal shelters
 - Support for adoption and rescue centers
 - Integration with pet management systems
- 5. Future Expansion**
 - Mobile application
 - Real-time camera detection
 - Support for other animals

TIP
Add customizable tags to sticky notes to make it easier to find, organize, and categorize important ideas as themes within your mural.

20 minutes

Step-3: Idea Prioritization

4

Prioritize

The ideas were evaluated based on their **importance** and **feasibility**. The web-based dog breed identification system using transfer learning was selected as the highest priority solution because:

- It provides high accuracy and reliability
- It addresses the main user problem of breed identification.

TIP
Participants can use their cursors to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the user pointer holding the **W** key on the keyboard.
